📁 PROJECTS

End-of-year projects

-2023: Technician Task Management System "Dart (Flutter 3.0) / Firebase BaaS"

I developed a cross-platform mobile application to efficiently manage the tasks assigned to technicians. This project helped me acquire skills in mobile development, database management, and asynchronous programming.

-2022: Resume Repository Management System "PHP Symfony / HTML5 / CSS"

I designed and produced a web application for managing resume repositories. This project enabled me to develop skills in web development, user interface design, and project management.

-2021: Education Management System "Laravel / MySQL / HTML5 / Bootstrap"

I designed and produced a web application for school management. This project helped me acquire skills in web development, database architecture, and project management.

School project:, Library management using Java 2EE / Spring MVC / Thymeleaf

The project involved the development of a web application for library management, which enabled me to hone my skills in web development, database architecture, and object-oriented programming.
